

You should build a simple web application using ASP.NET MVC to allow graduate students to apply for a scholarship program. Submitted applications need to be reviewed by the system admins.

Students should be able to submit a new application or edit an existing application. **[optional:** They should receive a notification email once their application gets accepted or rejected.]

System admins should be able to see students' applications, export applications to an excel sheet and accept or reject these applications. **[optional:** They can import some applications from an excel sheet for students who submitted their applications offline.]

Here is the information to be submitted by the graduate students:

- First Name
- Last Name
- Email Address
- Password
- Birth Date
- National ID
- University
- Major
- GPA
- Resume

You should add your source code to a public repository on Github; you need to push your commits as soon as you add a new feature. After finishing the project, please send the repo's link to mohamed.elfadly@aucegypt.edu
